

Yu TANAHASHI (棚橋 悠)

Married name: Yu IKEYA (池谷 悠)

Graduate School of Economics, University of Tokyo, Japan

09069589007 | yutanahashi795@g.ecc.u-tokyo.ac.jp

Profile

Project Researcher under Prof. Aki Matsui (from May 2026) and Research Assistant at the UTokyo Market Design Center (UTMD) (from June 2026). Background in IT engineering with strengths in programming and data analysis. M.A.S. (Interdisciplinary Information Studies); graduate thesis on congestion-aware MaaS routing using spatial flow data.

Research Experience (Academic)

Graduate School of Economics, University of Tokyo

Project Researcher

May 2026 – present

Supervisor: Prof. Aki Matsui

- Textbook authorship
- Research on “Disability and Economics”

The University of Tokyo Market Design Center (UTMD)

Research Assistant

June 2026 – present

- Implementation of matching algorithms
- Development of demonstration materials and prototypes

Research Interests

- Game Theory
- Information Science
- Transportation Engineering

Professional Experience (Industry)

Yahoo! Japan Corporation

Software Engineer

April 2022 - September 2023

- Maintenance and operations of the Business Central platform (BCPF)
- Improved the reliability and stability of the e-commerce platform infrastructure

LY Corporation

Software Engineer

October 2023 - July 2024

- Maintenance and operations of the Business Central platform (BCPF)

Atrae Inc.

Software Engineer

August 2024 - April 2026

- Maintenance and operations of Wevox, an employee engagement platform

Education

University of Tokyo — M.A.S. (Interdisciplinary Information Studies) 2022

Master's thesis: "Optimal Routing in Congestion-Avoiding Mobility-as-a-Service: Evidence from Spatial Human Flow Data"

「空間人流データを用いた混雑を回避した MaaS における最適経路発見」

Supervisor: Prof. Noboru Koshizuka (越塚 登)

University of Tokyo — B.A. (Economics) 2020

Graduate thesis: "Game-Theoretic Analysis of Club Combat"

「クラブコンバットのゲーム理論的分析」

Supervisor: Prof. Aki Matsui (松井 彰彦)

Thesis

Master's Thesis: Developed a novel MaaS route generation method that accounts for congestion and other non-transport constraints while optimizing the order of visits across multiple destinations.

Graduate Thesis: Used a signaling-game model to explain why attacks remain frequent in club combat despite the usual advantage of waiting, but the ambiguity of exploitable openings prevented identification of a clear strategic advantage for winners.

Technical Skills

Programming: Python, Java, SQL, HTML, CSS, JavaScript, Ruby

Tools: Git, GitHub/GitLab, Docker, Kubernetes, MySQL, BigQuery, LaTeX, Jupyter Notebook, RStudio, Slack, Notion

Analysis: Data analysis, Statistical modeling, Machine learning, Optimization, Simulation, GIS, Network analysis, Social network analysis

Publications and Theses

Theses: Master's thesis, University of Tokyo, 2022. Bachelor's thesis, University of Tokyo, 2020.
